TITLE: Structure sensitivity of plastic properties of electron beam  
melted molybdenum alloys

SOURCE: Fizika i metallov i metallovedeniye, v. 22, no. 2, 1966,  
227-233

TOPIC TAGS: molybdenum, molybdenum alloy, molybdenum alloy structure,  
molybdenum alloy, plasticity, METAL CRYSTAL

ABSTRACT: Specimens of electron-beam melted molybdenum and Mo-C-Ti  
and Mo-B-Ti alloys have been subjected to bending tests in the as-cast  
and annealed (in vacuum at 2000C for 1 hr) conditions. It was found  
that the plasticity of molybdenum alloys depends, to a great degree,  
on their structure. Specimens of pure molybdenum and Mo-C-Ti alloy cut  
from the ingots along their longitudinal axes had crystals positioned  
in the lengthwise direction and they were plastic. As-cast pure

UDC: 548.4

Card 1/2

ACC NR: AP6033049

molybdenum longitudinal specimens withstood bending to 180°, without failure, while annealed specimens failed at 150° in a transcrystalline manner. Specimens of Mo-C-Ti alloy broke at a 150—160° bending angle with a fracture along the grain. Specimens of pure molybdenum and Mo-C-Ti alloy cut across the ingot axis were predominantly brittle and broke at 0°, with the exception of annealed specimens which broke at 70—90°. All longitudinal and crosssectional specimens of Mo-B<sup>2</sup>-Ti alloy were brittle, showing predominantly transcrystalline fracture. It was established that alloys with high plasticity have clearly developed fragmentation and a disorientation of substructure fragments of 2—4°. Orig. art. has: 4 figures and 1 table.

TITLE: Concerning the fluxes produced in a standing sound wave 21

SOURCE: Akusticheskiy zhurnal, v. 11, no. 1, 1965, 35-41

TOPIC TAGS: sound energy, sound wave, standing wave, Reynolds number, energy density

ABSTRACT: The purpose of the investigation was to estimate theoretically and experimentally the rates of flow excited by a sound wave at high acoustic-energy densities, with practical applications such as acoustic drying of materials in view. It is pointed out in the introduction that little research was done on other than liquid media, especially the boundary between a solid and a gas. An analysis of the flux produced in an acoustic wave has shown that the Rayleigh solutions are valid only at relatively low energy density, and are inapplicable when the Reynolds number exceeds unity. The experiments were performed in a round tube 40 mm in diameter, using a dynamic siren as a sound source. The absolute velocities were

Card 1/2

L 38122-65

ACCESSION NR: AP5006177

measured by photographing particles suspended in the air with a high-speed camera (up to 1500 frames/sec), and with a Pitot tube and a thermoanemometer. The flow configuration agreed with that derived by Rayleigh, but the flow rate was one order of magnitude larger at a sound-energy level of about 140 dB, corresponding to an approximate Reynolds number of 1100. Orig. art. has: 6 figures and 14 formulas.

TITLE: Measurement of the boundary layer thickness in the presence of a sonic field

SOURCE: Akusticheskiy zhurnal, v. 12, no. 3, 1966, 372-373

TOPIC TAGS: boundary layer, reaction kinetics, ~~combustion~~, heterogeneous combustion, *boundary layer thickness, acoustic wave, acoustic field, steady flow*  
ABSTRACT: It is well known that a sonic field considerably increases the reaction rate of heterogeneous processes. This reaction rate increase is due to reduction of the hydrodynamic boundary layer thickness. Therefore, a study was made of the thickness of the boundary layer on a flat plate in an air stream with 2-3 m/sec velocities in the presence of acoustic waves with frequencies of 1.2-4 kcps and acoustic pressures of  $7.6 \times 10^{-3}$  -  $2.4 \times 10^{-4}$  bar. The thickness of the boundary layer was measured with a hot wire anemometer which was automatically displaced across the boundary layer. The results showed that for a steady-state flow with a velocity of 2 m/sec and a boundary layer thickness of 10 mm, the application of an acoustic field can reduce the boundary layer thickness by two orders of magnitude. TITLE:

A Comparative-Morphological Investigation of the Development of the Hypophysis in Teleosts (Sravnitel'no- morfologicheskoye issledovaniye razvitiya gipofiza kostistyykh ryb)

PERIODICAL: Doklady Akademii nauk SSSR, 1958, Vol 122, Nr 6, pp 1126-1128 (USSR)

ABSTRACT:

The problem of the many-sided function of the hypophysis of teleosts is still insufficiently explained. The reason for this is its structure. The pituitary gland in this case consists of several morphologically different lobules which, however, do not show distinctly visible boundaries. The tissue of the neurohypophysis even penetrates more or less into all parts of the epithelial component of the above gland. Also the removal of the hypophysis is rendered difficult due to its anatomic position in the fishes. The problem of the role of the transition zone in the hypophysis of teleosts has not yet been solved (Refs 4,6,7). The explanation of the problem whether single cell-groups according to their function and location in the various lobules differ as compared to other vertebrates is one of the ways to solve this problem. In recent vertebrates 2 developmental types of the epithelial component of the hypophysis can be distinguished:  
A) Above the spot where the oral cavity is formed a cord of epithelial

Card 1/3

SOV/20-122-6-48/49

A Comparative-Morphological Investigation of the Development of the Hypophysis  
in Teleosts

cells grows from the internal ectoderm-layers towards the lower area of the brain and of the front end of the chorda. This cord later separates from the ectoderm and forms the rudiment of the hypophysis (in the case of cyclostoma, teleosts, sturgeons, and amphibia).  
B) Another developmental type is observed in Selachii and amniotes: Rathke's pouch as is known forms due to the extroversion of the ectoderm of the upper wall of the oral cavity. From this pouch the hypophysis rudiment develops. The authors investigated the hypophysis of the carp: Of larvae and young fishes of this year of the age of some days to 3 months. The morphological differentiation of the hypophysis in young carps (Figs 1-4 and description) resembles the one in breams and carps (Refs 11-13). The hypophysis investigated by the author, however, started working only much later than is said in reference 11 (in the case of a length of 35 mm). The authors conclude from their investigations that the functions connected with the front lobule of the hypophysis of teleosts (gonadotrophic, thyreotropic, and other functions) are carried out in all other vertebrates (including Selachii, sturgeons, and Dipnoi) by the cells of the front part of the hypophysis, i.e. by the main lobule or by the transition zone.

Card 2/3

SOV/20-122-6-48/49

A Comparative-Morphological Investigation of the Development of the Hypophysis  
in Teleosts

Since no basophile cells are found in the main lobule (they were found only in the transition zone) the authors express the opinion that the hormonal functions of the front lobule of the hypophysis are performed by the transition zone.- There are 4 figures and 13 references, 2 of which are Soviet.

TITLE: Automatic Pressure-Regulation in Glass-Melting Furnaces  
(Avtomaticheskoye regulirovaniye davleniya v steklovarenykh  
pechakh)

PERIODICAL: Steklo i Keramika, 1958, Nr 3, pp. 17-22 (USSR)

ABSTRACT: The major part of the continuous glass-melting furnaces has a regulation of pressure which is carried out by an electro-hydraulic system. Tests with this were carried out in 1952 by V.G. Gutop and V. M. Obukhov in the Gusevskiy glassworks imeni Dzerzhinskiy (reference 2). Their insufficient reliability and complication was proved in practice. This induced some members of the personnel, amongst whom there was also V. M. Obukhov, to propose other systems of pressure - regulation. A series of systems is compared with each other in this work. The regime of chamber pressure has a great influence on the technology and thermodynamics of glass - melting, since it produces the gaseous atmosphere required above the metal. Special importance is attributed to the

Card 1/3

Automatic Pressure-Regulation in Glass-Melting Furnaces

72-58-3-5/15

gaseous and hydraulic regime during the operation with a layer of soda-sulfate, as it was proved in the practice of the Gomel glassworks. The composition of the exhaust gases of system number 1 of the glass-works at Gomel, is shown in table 1. With respect to the problem of pressure-regulation, the authors refer to the works by M. I. Korobko (reference 1), V. G. Gutop and B. M. Usvitskiy (references 1 and 2). An electro-hydraulic system of pressure-regulation is shown in figure 1. Further, the deficiencies of the hydraulic systems are fully described and the advantages of an electric system, as well as of the rotary slide valves, are pointed out. Data on both equipment and cost of various systems of regulation are given in the table 2. The following component parts of this system are given: an electric manometer **DMR**, regulator **RDM** - 3, recording mechanism **TNSK**, magneto-starter **MPKRO** -210, executive mechanism **LMT** 25/120, electron regulator **EPR** -, and others. 3 systems of regulation are represented in figures 3, 4 and 5 and a diagram of the recording device is shown in figure 6. The automatic pressure regulation in the furnace, based on the measurement at one point, is qualified as insufficient. The use of the regulator **EPR** of the Institute for Gas-Utilization AN Ukrainian SSR

Card 2/3

Automatic Pressure-Regulation in Glass-Melting Furnaces

which regulates all sections of the furnace (figure 7) and which was experimentally used in the Gomel glassworks, is recommended. There are 7 figures, 2 tables, and 7 references, 7 of which are Soviet.

TITLE:

Investigations in the Field of the Dioxides of the Acetylene Series. I (Issledovaniya v oblasti diokisey atsetilenovogo ryada. I)

PERIODICAL:

Zhurnal obshchey khimii, 1959, Vol 29, Nr 7, pp 2132-2137 (USSR)

ABSTRACT:

The purpose of the present paper was the reaction of dioxides of the acetylene series with amines, a comparison of the reactivity of di- and monooxides of this series as well as the solution of the problem as to how the oxide cycle opens under the action of amines, and under which conditions the forming diamino glycols are transformed into the corresponding  $\beta$ -aminopyrrol carbinols. Pyrrole homologs of this structure have hitherto not been described in publications. The dioxides of the acetylene series have equally been little investigated so that the investigation of the opening of the oxide ring under the action of alcohols in alkaline or acid catalysis was of interest. The dioxide 2,5-dimethyl dioxydo-1,2-5,6-hexyne-3(I) served as initial substance

Card 1/3

Investigations in the Field of the Dioxides of  
the Acetylene Series. I

SOV/79-29-7-6/85

In the reaction of (I) with ammonia, methyl- and ethyl amine it was found that this dioxide has a higher reactivity than the monoxides of the acetylene series. Thus, (II) reacts with amines when heated in closed ampoules at 100°, in contrast to (I) which reacts explosion-like even with methylamine (without cooling). By the reaction of methylamine with (I) compound (III) is formed which in the case of longer heating passes into compound (IV). Thus, N-methyl-2-(1-oxy-2-methylamino isopropyl)-4-methyl pyrrole and N-ethyl-2-(1-oxy-2-ethyl-amino isopropyl)-4-methyl pyrrole were synthesized. In the reaction of the dioxide with alcohol it was found that in the alkaline catalysis 1,6-diethoxy-2,5-dimethylhexyne-3-diol-2,5 and in acid catalysis 2,5-diethoxy-2,5-dimethylhexyne-3-diol-1,6 is formed.

TOPIC TAGS: graphite, superhigh pressure, detonation wave, shaped charge

ABSTRACT: Specimens of various materials, including nickel, iron, zinc, lead, aluminum and carbon were subjected to ultrahigh pressure produced by simultaneous detonation of two shaped charges, one at each end of the specimen. Pulverized graphite subjected to this type of compression adheres tightly to the walls of the container and shows a cavity close to the axis. Graphite with an initial density of 1.65 g/cm<sup>3</sup> was compressed to 2.16 g/cm<sup>3</sup>. The specimens showed holes caused by the explosive expansion of the compressed material after the action of the detonation wave stops. Experiments with lead showed complete dispersion. Compression of the specimens produces high temperatures resulting in melting and bubbling of the material. Orig. art. has: 6 figures.

 TITLE Asymptotic decomposition of non-homogeneous Markov chains.  
 PERIODICAL Doklady Akad.Nauk 112, 206 (1957)  
 reviewed 6/1957

The author considers a non-homogeneous Markov chain with a finite number of possible states  $e_1, \dots, e_s$ . Let the random term  $\zeta_n^{(\alpha)}$  be the number of successes in the state  $e_\alpha$  during the first  $n$  steps. Then the author considers the probability that the vector  $\zeta_n = (\zeta_n^{(1)}, \dots, \zeta_n^{(s)})$  assumes the value  $m = (m_1, \dots, m_s)$  if  $e_\gamma$  was the initial state. A theorem is formulated without proof. Earlier results of the author (Doklady Akad.Nauk 107, 4 (1956)) are used.

TITLE:

Local Limit Value Theorem for Inhomogeneous Markov Chains  
With a Countable Number of Possible States. (Lokal'naya  
predel'naya teorema dlya neodnorodnykh tsepy Markova so  
shchetnym chislom vozmozhnykh sostoyaniy)

PERIODICAL: Doklady Akad.Nauk SSSR, 1957, Vol.115, Nr.5, pp.872-873 (USSR)

ABSTRACT: Let  $X_1, X_2, \dots, X_n, \dots$  be a sequence of random variables which  
assume integral values and which are combined in an inhomogeneous  
Markov chain, where the transition probabilities are  
 $p_{ij}^{(k)} = P\{X_k = j | X_{k-1} = i\}$  and the absolute probabilities are  
 $p_{k|j} = P\{X_k = j\}$ . Let  $S_n = X_1 + X_2 + \dots + X_n$ .

Theorem: Let the following conditions be satisfied:

I. There exists a  $j_0$  for which  $p_{ij_0}^{(k)} \geq \alpha > 0$  for arbitrary  $i$  and  $k$ ,

II.  $B_n^2 = DS_n \geq c_n$ ;  $c > 0$ ,

III. There exist uniformly bounded absolute moments  $M|X_k|^s$  up to  
the order  $s$  ( $s \geq 3$ ),

Card 1/2

Local Limit Value Theorem for Inhomogeneous Markov Chains  
With a Countable Number of Possible States.

20-5-6/54

IV. The greatest common divisor of the differences  $j-j_0$  for which  $\frac{1}{\ln n} \sum_{k=1}^n p_{k|j} \rightarrow \infty$  ( $n \rightarrow \infty$ ), equals 1.

Then there holds the decomposition

$$B_n P\{S_n=m\} = g(x_{nm}) + \sum_{k=1}^{s-3} \frac{1}{n^{k/2}} P_k\left(-\frac{d}{dx_{nm}}\right) g(x_{nm}) + O\left(\frac{1}{n^{\frac{s-2}{2}}}\right),$$

Card 2/2

where  $g(x) = \frac{1}{\sqrt{2\pi}} \exp\left[-\frac{x^2}{2}\right]$ ,  $x_{nm} = \frac{m-MS_n}{B_n}$  and  $P_k\left(-\frac{d}{dx}\right)g(x)$  denotes that in the polynomial  $P_k(it)$  the powers  $(it)^v$  can be replaced by  $(-1)^v \frac{d^v}{dx^v} g(x)$ .

PURPOSE: The book is intended for mathematicians.

CONTENTS: The book contains 41 articles submitted to the Conference and dealing with the theory of probability and mathematical statistics. Some of the articles are the papers read at the Conference and edited for publication, while others outline the theses of papers which appeared or are scheduled to appear, wholly or in part, in other publications; in some cases, such publications are quoted. A list of the papers whose contents were published elsewhere is included and the places of publication are indicated. Individual articles examine theories of mass service, spectral functions, Markov's chains, and certain processes. Questions of the theory of such items as the method of least squares, the stochastic, titles, and functions of such items as the method of least squares, the stochastic, Markov's and diffusion processes, measures and their applications, the theory of Brownian motion, Markov-type random fields, visible distribution of stars, Brownian motion, capacity of radio channels, and defective products are considered. No preambles are mentioned. References accompany some of the articles.

TITLE: Local limit theorems and asymptotic expansions for inhomogeneous Markov chains

SOURCE: Litovskiy matematicheskii sbornik. v. 1, no. 1-2, 1961, 231-314

TOPIC TAGS: Markov chains, local limit theorem, conditional characteristic function, asymptotic expansion

ABSTRACT: Chapter headings are:

Introduction

Chapter I. Transitional characteristic functions

1. Definition and general properties
2. Ergodicity of transitional characteristic functions
3. Asymptotic expansion for the characteristic function of a sum

Chapter II. Local limit theorems in one dimension

1. Some lemmas
2. Estimates of the characteristic function of a sum in the second interval
3. Estimates of the characteristic function of a sum in the third interval

TITLE: Asymptotic expansion of the characteristic function of a sum of independent random variables

SOURCE: AN UzSSR. Institut matematiki. Predel'nyye teoremy\* teorii veroyatnostey (Limit theorems for the theory of probability). Tashkent, Izd-vo AN UzSSR, 1963, 123-130

TOPIC TAGS: asymptotic property, asymptotic expansion, characteristic function, bounded function, Liapunav function

ABSTRACT: The essence of the paper is the theorem: Let  $\xi_1, \xi_2, \dots$  be a sequence of independent random variables with zero means, having the finite absolute moments  $M|\xi_j|^s$ ,  $s \geq 3$ ,  $j=1,2,\dots$ . If the Liapunov fraction  $L_{sn} \rightarrow 0$  as  $n \rightarrow \infty$ , the characteristic function  $f_n(t)$  of the sum  $S_n = \sum_{j=1}^n \xi_j$  has the asymptotic expansion

$$f_n(t) = e^{-\frac{t^2}{2}} \left( 1 + \sum_{k=3}^{\infty} Q_{kn}(it) L_{kn} + o(|t|^3 + |t|^{3(n-1)} L_{kn}) \right)$$

TITLE: Limit theorems for density functions and asymptotic expansions for the distribution of sums of independent random variables

SOURCE: Teoriya veroyatnostey i yeye primeneniya, v. 10, no. 4, 1965, 645-659

TOPIC TAGS: function analysis, distribution function, dispersion, equation, probability

ABSTRACT: The author studies the sequence

$$\xi_1, \xi_2, \dots, \xi_n, \dots \quad (1.1)$$

of independent random variables with  $M\xi_k = 0$  and finite dispersions  $\sigma_k^2 = D\xi_k, k = 1, 2, \dots$

It is assumed  $S_n = \sum_{k=1}^n \xi_k, B_n^2 = \sum_{k=1}^n \sigma_k^2, Z_n = \frac{S_n}{B_n}.$

The author presents theorems for the density functions and asymptotic expansions for the distribution functions and the density functions of sums of nonidentically distributed independent random variables. Orig. art. has: 55 formulas.

Title : Relaying radio programs over telephone wires

Periodical : Radio 7, 17-18, July 1954

Abstract : The method and equipment used for relaying radio programs from Riga, Latvia, to regional radio centers (on a 85 kc frequency) and then to local intra-regional centers (on a 31.5 kc frequency) are described. The component parts of the radio equipment are also described, and their arrangement and location in the office of the local telephone stations are indicated.

Staub Fr.

Staub Fr., Prof. Eng. "Steel for Gear Wheels." (Stal na kola zebate).  
Hutnik, No 5-6, 1949, pp. 184-187, 4 figs., 1 tab.

The author discusses a method applied in Germany for the manufacture of gear wheels from carbon steel containing approx. 0.8% C, 0.2 to 1% Mn and approx. 0.2% V, with gradual heat treatment (in a salt bath furnace), which produces a well-hardened surface layer, and simultaneously gives high resistance properties to the core. A comparison was carried out in respect of the distribution of hardness of the teeth of gear wheels made by the above method without case hardening (Bn) and with case-hardened gear wheels. Consideration is given to the problem of selection of material according to the construction of the gear wheels, to the heat treatment method, economic advantages and the possibilities of this method being adopted by units of Polish industry.

Investigation on the suitability of steel and cast iron for  
Case-Hardening with High-Frequency Currents. F. Mach and  
K. Pogorski. (*Prace Instytutu Obrabek Inst. MTL*, 1951,  
& No. 3, 373-387). [In Polish]. The results of investigations  
on the induction hardening of steel, steel castings, and cast  
iron are presented. The effect of surface temperature reached  
during heating on the hardness of the surface layer and the  
effect of the heating time on the depth of hardening are  
discussed. The mechanism of the transformations during  
high-frequency heating and their influence on the structure  
of the hardened zone are discussed.—v. o.
